EXP-PHY-005: near-Γ B1 is linear from (|k̃|, f̃)=(0,0), but the scalar TE index predicts the wrong slope

Raw real-MPB: 192 structures; max |B1(Γ)|=0.00e+00; through-origin R² min=0.9999999967; max fit RMSE=5.73e-07. k̃=ka/(2π); Γ–M uses equal |k̃|, so no √2 coordinate mismatch.
