global_local_band_operator_v1: fixed fusion of global and local physics features

EXP-FWD-020 architecture contract: width 64, six blocks, Tucker modes 12x12 (rank 0.75), periodic 7x7 depthwise local mixing, expansion 4.

A | End-to-end model

B | One GlobalLocalBlock

C | Controlled identity and evidence boundary

Compared with tfno2d_band_v3: remove the channel branch, replace learned sigmoid fusion with fixed mean, and upgrade local 3x3 dense Conv to periodic ConvNeXt-style 7x7 depthwise mixing.

Current status: implemented_not_authorized. No training, validation, held-out test, cross-domain, real-MPB or physical evidence exists yet.
